

an outer wall of the elongated main body portion and said uppermost hub.

---

Please amend claim 4 to read as follows:

---

- A<sup>3</sup> 4. (Amended) The tee of claim 1, wherein said inlet/outlet port includes an outlet opening and a sweep portion arcing upwardly from said elongated main body portion toward a ring defined by said outlet opening, said sweep portion defining an opening in communication with said tubular opening and said outlet opening.
- 

Please amend claim 5 to read as follows:

---

- A<sup>4</sup> 5. (Amended) The tee of claim 1, further comprising at least one horizontal reinforcement rib on said outer wall of the elongated main body portion.
- 

Please amend claim 7 to read as follows:

---

- A<sup>5</sup> 7. (Amended) A tee for use at the inlet or outlet of a septic tank, said tee comprising:  
a generally r-shaped first mating half having  
an elongated main body portion that is generally U-shaped in cross-section,  
a lowermost end integral with said elongated main body portion,  
a half-ring shaped upper lid-receiving end having a larger radius than a radius of said elongated main body portion,  
a sweeping extension integral with said elongated main body portion and terminating at a half-ring shaped inlet/outlet,  
a first mating edge running lengthwise along said lowermost end, said elongated main body portion, and said upper lid-receiving end, said first mating edge being located opposite said sweeping extension;
- B

~~a second mating edge running along said lowermost end, said elongated main body portion, an underside of said sweeping extension portion, and a bottom of said half-ring shaped inlet/outlet,~~

~~a third mating edge running along said upper lid-receiving end, an upper side of said sweeping extension portion, and a top of said half-ring shaped inlet/outlet,~~

~~a generally r-shaped second mating half complementing the generally r-shaped first mating half, said generally r-shaped second mating half having~~

~~an elongated main body portion that is generally U-shaped in cross-section,~~

~~a lowermost end integral with said elongated main body portion,~~

~~a half-ring shaped upper lid-receiving end having a larger radius than a radius of said elongated main body portion,~~

~~a sweeping extension integral with said elongated main body portion and terminating at a half-ring shaped inlet-outlet,~~

~~a fourth mating edge running lengthwise along said lowermost end, said elongated main body portion, and said upper lid-receiving end, said fourth mating edge being located opposite said sweeping extension,~~

~~a fifth mating edge running along said lowermost end, said elongated main body portion, an underside of said sweeping extension portion, and a bottom of said half-ring shaped inlet/outlet, and~~

~~a sixth mating edge running along said upper lid-receiving end, an upper side of said sweeping extension portion, and a top of said half-ring shaped inlet/outlet.~~

---

Please amend claim 10 to read as follows:

~~10. (Amended) The tee of claim 7, in combination with an effluent filter having a generally~~

~~cylindrical profile, said effluent filter <sup>B</sup> having a lid received in the upper lid-receiving ends.~~

Please amend claim 11 to read as follows:

A7 11. (Amended) The combination of claim 10, wherein said effluent filter includes a sealing gasket engaged with an inner wall of said lowermost ends of the tee, and wherein said inner wall of the lowermost ends of the tee include elements having locking rims to engage an ~~outermost lip of said sealing gasket.~~ <sup>B</sup>

Please amend claim 15 to read as follows:

A8 15. (Amended) A one-piece sanitary tee baffle comprising:  
Sub B10  
an elongated generally cylindrical main body portion defining a tubular opening;  
a cylindrical uppermost hub coaxial with said elongated main body portion and having an inner diameter greater than said diameter of the elongated main body portion;  
an inlet/outlet port in communication with the tubular opening;  
a first rib extending generally longitudinally along said elongated main body portion;  
and  
a second rib extending generally longitudinally along said elongated main body portion, said elongated generally cylindrical main body portion having a wall thickness between 0.075" and 0.100" over a substantial portion thereof

Please add the following new claims:

A9 - 19. The tee of claim 4, having a lowermost end and a length extending from a top of the uppermost hub to said lowermost end, said outlet opening of the inlet/outlet port being located along said length nearer to said uppermost hub than to said lowermost end.

20. The tee of claim 19, wherein said main body portion houses an effluent filter received in said tubular opening, and said lowermost end extends into a clear zone of a septic tank when the tee is mounted at a septic tank outlet.

21. The tee of claim 1, further comprising a first rib extending generally longitudinally along said elongated main body portion; and

a second rib extending generally longitudinally along said elongated main body portion.

22. The one-piece sanitary tee baffle of claim 15, wherein the wall thickness of the elongated generally cylindrical main body portion is about 0.090".

Sub  
B12

23. A tee comprising:

an elongated generally cylindrical main body portion defining a tubular opening;  
a cylindrical uppermost hub coaxial with said elongated main body portion and having an inner diameter greater than said diameter of the elongated main body portion;  
an inlet/outlet port in communication with the tubular opening;  
an outer wall on said elongated main body portion; and  
at least one horizontal reinforcing rib on said outer wall.

24. The tee of claim 7, wherein said lowermost end of each of the first and second mating halves has a smaller radius than the radius of the elongated main body portion.
